EDUCATION

Northeastern University

Boston, MA

Bachelor of Science in Computer Science and Finance

May 2026

Coursework: Software Engineering, Algorithms, Object-Oriented Design, Database Design, Computational Finance

WORK EXPERIENCE

Vanguard

Malvern, PA

Incoming Investment Systems Software Engineer, Technology Leadership Program

Aug 2026

Scotiabank

New York, NY

Trading Desk Software Engineer Co-op

Dec 2024 – June 2025

- Extended a Java pricing automation pipeline to support twice as many derivative structures by improving price request parsing and transformation logic, raising daily throughput from 80 to 300 RFQs
- Developed an automated email system with Spring Mail triggered by RESTful API calls to deliver prices directly to sales desks, eliminating manual trader intervention and reducing turnaround time by 90%
- Maintained a MySQL database for RFQ intake while updating SOAP/XML integrations to ensure data consistency

Marsh McLennan

Philadelphia, PA

Reinsurance Risk Modeling Co-op

Jan 2024 – June 2024

- Engineered Alteryx and MySQL data pipelines to process over 500,000 catastrophe loss records across 100 client portfolios to identify risk patterns that improved model forecast accuracy by 6% for wildfire and hurricane losses
- Constructed SQL workflows to process outputs from Verisk Touchstone RE and RMS, supporting pricing and placement decisions for 20 client reinsurance placements

J&K Seminars

Wyncote, PA

Software Engineer Intern

Apr 2023 – July 2023

- Designed an automated attendance tracking system using Python and Zoom API to process over 1,000 monthly webinar participants across 25 states, reducing manual analysis for regional CE credentialing by 95%
- Deployed a dashboard to compare webinar attendance with state license requirements, identifying participants needing additional forms and eliminating 90% of manual checks

PROJECTS

[Market Brief](#) | Python, FastAPI, OpenAI API, React, TypeScript

Mar 2026

- Built a full-stack earnings call analyzer with FastAPI and React, using a Whisper transcription and map-reduce approach with OpenAI API for summarization, KPI extraction, sentiment analysis, and chat interface

[Bullseye](#) | Python, FastAPI, PostgreSQL, React, TypeScript

Oct 2025

- Created a stock tracking platform with FastAPI and React featuring authentication, watchlists, and automated email reports aggregating financial and sentiment data

[Myolog](#) | Python, Flask, Selenium, JavaScript, PostgreSQL

Aug 2025

- Automated a Selenium scraping pipeline with GitHub Actions to ingest 30,000+ workout records into a PostgreSQL database, visualizing strength trends across 12 charts in an interactive Flask dashboard

[Options Pricer](#) | Python, NumPy, SciPy, yfinance

Dec 2024

- Modeled European options using Black-Scholes and Monte Carlo with live market data and a Brent-method implied volatility solver to compare theoretical and market pricing

SKILLS & TOOLS

Languages: Java, Python, SQL, JavaScript, TypeScript, HTML, CSS

Technologies: React, Flask, FastAPI, Redis, MongoDB, PostgreSQL, Alteryx, Tailwind

Tools: Git, GitHub, Docker, CI/CD, Vercel, Render, Jira, Maven, Gradle, Apache Tomcat, JUnit, Pytest, Jest
